The applicant declares that a viable sample of basic seed of this variety will be deposited upon request before issuance of a certificate and will be replenished periodically in accordance with such regulations as may be applicable. (See Section 52, P.L. 91-577).

14A. Does the applicant(s) specify that seed of this variety be sold by variety name only as a class of certified seed? (See Section 83(a), P.L. 91-577) (If "Yes," answer 14B and 14C below.) ☐ YES ☒ NO 9/7/7614B. Does the applicant(s) specify that this variety be limited as to number of generations? ☐ YES ☒ NO

14C. If "Yes," to 14B, how many generations of production beyond breeder seed?

Applicant is informed that false representation herein can jeopardize protection and result in penalties.

The undersigned applicant(s) of this sexually-reproduced novel plant variety believes that the variety is distinct, uniform, and stable as required in Section 41 and is entitled to protection under the provisions of Section 42 of the Plant Variety Protection Act (P.L. 91-577).

INSTRUCTIONS

GENERAL: Send an original copy of the application, exhibits and \$50.00 fee to U.S. Dept. of Agriculture, Consumer and Marketing Service, Grain Division, Hyattsville, Maryland 20782. Retain one copy for your files. All items on the face of the form are self-explanatory unless noted below.

ITEM

- 5 Insert the date the applicant determined that he had a new variety.
- 12a First, give the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method. Second, give the details of subsequent stages of selection and multiplication. Third, indicate the type and frequency of variants during reproduction and multiplication and state how these variants may be identified. Fourth, provide evidence on stability.
- 12b First, give any special characteristics of the seed and of the plant as it passes through the seedling stage, flowering stage and the fruiting stage. Second, describe the mature plant and compare it with a similar commercial variety grown under the same conditions, and indicate the differences.
- 12c A supplemental form will be furnished by the PVPO to describe in detail a variety for each kind of seed.
- 12d Provide complete data indicative of novelty. Seed and plant specimens may be submitted and seeds submitted may be sterile. Where possible, include photographs of plant comparisons, chemical tests, etc.
- 12e Indicate whether applicant is the actual breeder, the employer of the breeder, the owner through purchase or inheritance, etc.

RED COACH 74 A

EXHIBIT A

Origin and Breeding History of the Variety

1. RED COACH 74A originated from a hand pollinated cross between Vanguard and Calmar. The cross was made in the Salinas Valley of California in 1970 by B C SEEDS' personnel.
2. Initial trial plantings were conducted in 1971 to allow for individual plant selection work. Several subsequent trial plantings were made following the initial selection process to allow for segregation and more comprehensive evaluations and selections. Selections were made on the basis of size, color, texture and heading capabilities.
3. The procedures involving trial plantings, evaluations and plant selections were repeated numerous times before finally attaining the desirable plant type. These plantings were conducted in Yuma, Arizona and the Salinas, San Joaquin and Imperial Valleys of California.
4. RED COACH 74A is genetically uniform and free of any distinct variations.

VARIETY: RED COACH 74A

EXHIBIT B: Botanical Description of the Variety

Annual. A crisphead variety with a large sized frame. Wrapper leaves heavily savoyed with intermediate Calmar-Vanguard shade of green color. Color not as dull as Vanguard. Wrapper leaves are broad and thick and are similar to Vanguard in size.

Head is spherical. Butt of plant is usually smooth, core being of large size. Petioles are medium smooth with good color (intermediate Calmar-Vanguard color). For early winter harvest in the Imperial Valley this variety will usually produce a larger head than Calmar. In the same harvest period it will more consistently produce a marketable head than Vanguard.

Seedstalk is extremely uniform in height. Produces a medium sized panicle similar to Calmar and is similar in its yielding characteristics.

It is more bolt tolerant than Vanguard. Seed color is black.

VARIETY: RED COACH 74A

EXHIBIT D: Data Indicative of Novelty

Red Coach 74A most closely resembles the variety Vanguard. The distinguishing features of Red Coach 74A compared to Vanguard include:

1. It is adapted to earlier mid-winter harvest in the Imperial Valley of California. The normal planting period for Red Coach 74A is October 3 to October 12, while the normal planting period for Vanguard is about October 20 to November 15.

Red Coach 74A is unique in that it is a Vanguard type that will produce marketable lettuce of optimum size and texture in the early January harvest period of the Imperial Valley.

Vanguard will produce lettuce that is too large, will lack solidity and at times bolt if planted in the October 3 to October 12 period in the Imperial Valley.

2. It has a slightly larger average frame size. Red Coach 74A is similar to Climax in size while Vanguard is similar to Merit when planted in the Red Coach 74A planting period in the Imperial Valley of California.
3. It has greater bolt tolerance. Seed production time required on Red Coach 74A averages 105 days, while seed production time on Vanguard averages 110 days.
4. It has brighter green color similar to one of its parents - Calmar.
5. It has more desirable texture.
6. Seedstalk height and emergence is much more uniform than the seedstalk height of Vanguard.

INSTRUCTIONS

GENERAL: The following publications may be used as a reference aid for completing this form:

1. C. M. Rodenburg, 1960, Varieties of Lettuce, An International Monograph, Instituut Voor de Veredeling van Tuinbouwgewassen, Wageningen, Holland.
2. L. L. Morse, 1930, Field Notes on Lettuce, published by Ferry-Morse Seed Co.

LEAF COLOR: Nickerson's or any recognized color fan may be used to determine the leaf color of the described variety. The following lettuce varieties may be used as a guide to identify the eight colors listed on the form.

Color	Variety
Red	"Salad Trim"
Reddish-brown	"Ruby"
Yellow	"Salad Bowl"
Yellowish-green	"Oakleaf"
Greyish-green	"White Boston"
Bluish-green	"Bibb"
Dark-green	"Imperial" group
Very dark green	"Deer Tongue"

PLANT SIZE: The following varieties may be used as a guide to identify the plant type size:
